

IsGenericValueImpl
< T >::Type

```
classDiagram
    class IsGenericValueImpl {
    }
    class internal_IsGenericValue["internal::IsGenericValue< T >"] {
    }
    internal_IsGenericValue --|> IsGenericValueImpl
```

The diagram illustrates a class hierarchy. At the top is a white box representing the 'IsGenericValueImpl' class, with the text '< T >::Type' below it. At the bottom is a grey box representing the 'internal::IsGenericValue< T >' class. A blue arrow with an open triangle head points from the grey box to the white box, indicating that 'internal::IsGenericValue< T >' inherits from 'IsGenericValueImpl'. Both boxes are divided into three horizontal sections.

internal::IsGenericValue< T >
